

## **Collaboration Highlights**

### **Minnesota/Berkeley**

NEES@Minnesota provided NEES@Berkeley by loaning a spare Krypton controller for use on testing at Berkeley. Minnesota also provided technical assistance by helping Berkeley configure the Krypton systems.

### **Berkeley/Reno**

During the previous quarter, NEES@Berkeley worked closely with NEES@Reno to coordinate shared use of the Krypton system. Berkeley, who had possession of the system during the final quarter, loaned it along with six load cells to Reno for use in NEES projects in Nevada. All of the borrowed components were returned upon completion of the experiments.

### **Reno/RPI**

NEES@Reno collaborated with NEES@RPI during Q4 of FY 2014 in order to obtain a high speed camera for use on one of Reno's projects.
