Capacity Building and Network Initiatives

Capacity Building Initiatives consist of community IT projects, Network EOT Initiatives and Facility enhancements. These three activities are purposed to ensure that both the individual sites and the network remain at the cutting edge in terms of information technology and equipment site capabilities as well as at the forefront of network-level EOT innovations. Figure 1 displays the average progress for the network for IT community enhancements, network EOT activities, and facility enhancements, as well as network resource sharing. On average, the sites conducted 97% of planned facility enhancements, 100% of community IT activities, 100% of the planned network EOT activities, and 100% of network resource sharing. Network-wide, progress for capacity building is 99%.
